

# Retrospective - Debug Divas

Hamzah Alansi, Lydia Acton, Nick Brown, Linda Strid

## **What went well:**

We divided the tasks well between the group members and people knew what to do or what needed to be done all the time. The use of Trello has for several group members been a great tool and has been used actively throughout the project. It allowed us to create a visual representation of our tasks, deadlines, and progress. This not only enhanced our project management but also helped us stay accountable to one another. In the beginning, we set up a discord channel that has been used for communication and it has been working well for us. We have shared relevant information and have been able to facilitate each other's work. The attendance has been high and the group members have shown up to meetings or communicated why they could not show up.

## **What to improve:**

Reflecting on our project experience, there are areas where we could have made improvements to ensure smoother execution. We could have divided tasks into smaller more manageable projects and made a clearer plan for the deadline. Then we might not have been in the situation where we did not manage to implement the CodeCove in time for assignment 2. The communication could also improve to avoid misunderstandings and better coordinate our efforts. It would help us avoid that kind of problem and help us meet the deadline in the future.

## **Actions to take:**

The actions that we are going to take to improve are setting more deadlines on critical tasks in Trello. We can then decide if they should be moved to the backlog or highly prioritized by the whole team in order to get them done by the final deadline. Improving communication within the team will be done by both improving the rate we ask each other for help and the amount of times we offer each other help. On the Friday labs, we will make sure everyone knows what needs to be done and that everyone knows what to do, and where everyone is in the project.
